Preface

The National Employment Office (NEO) regularly publishes its most common statistics. Extensive data on the NEO's most substantial missions are published on its website on a monthly basis. Apart from these tables, the NEO also publishes a monthly commentary on the evolution of unemployment benefits and of career break and time credit schemes based on our payment statistics. Furthermore, the NEO composes a detailed annual report. This consists of a volume on our activities, as well as a substantial statistical volume, describing all schemes that are a part of the NEO's missions (partial and full unemployment, career break and time credit...).

Our brochure called the 'Quarterly Indicators of the Labour Market', however, contains the most recent quarterly data on the NEO's missions. It also provides data on a number of external economical indicators, allowing us to view our data in a larger context, and some elements for comparing Belgian unemployment to European trends. Publishing these data on a quarterly basis enables us to detect trends for these schemes and for the labour market at large at a faster rate than is possible in the context of a yearly report. At the same time, the impact of seasonal or technical effects is softened when compared to monthly statistics. If possible, all data in the 'Quarterly indicators' are published as a series containing the five most recent years. In this way, the NEO hopes to put the most recent numbers in a larger context.

Since the mentioned publications are only being made available in Dutch and French, this abbreviated English version of the 'Quarterly Indicators' was devised in order to enable a larger international public to take note of its contents. Relevant metadata and mention of sources, however, are only provided in the detailed versions in French or Dutch. The English publication contains a summary of the most important trends observed in the brochure, as well as the statistical series containing all quarterly and yearly data on the indicators used for this analysis. The summary of the last edition of each year will focus on the yearly rather than the quarterly data. In this way, the NEO strives to contribute to the analysis and progress of our labour market.

1

Summary of observations

Fully unemployed benefit recipients seeking work (FUBR-SW)

The number of fully unemployed benefit recipients seeking work (FUBR-SW) decreased in Q1 2022. On average there were 305,116 FUBR-SW. Compared to Q1 2021, this is a decrease by 13.0% (-45,596 units).

Chart: Variation of the number of FUBR-SW on an annual basis

Between Q1 of 2021 and Q1 of 2022 we observe:

- decreasing numbers of FUBR-SW in the Flemish Region by 18.5%, by 9.7% in the Walloon Region and by 8.8% in the Brussels Capital Region. In Q1 2022 we observe 113,906 FUBR-SW in the Flemish Region, 128,457 in the Walloon Region and 62,753 in the Brussels Capital Region;

- a decrease by 13,2% of male and by 12,8% for female FUBR-SW;

- decreasing numbers of FUBR-SW for the age class of < 25 years old (-23,4%), the age class of 25-49 years old (-13,8%), the age class of 50-59 years old (-12,0%) and the age class of 60 years old or more (-5,9%).

Fully unemployed benefit recipients not seeking work (FUBR-NSW)

The average number of unemployed not seeking work went from 28,476 in Q1 2021 to 19,175 in Q1 2022. This is a decrease amounting to -32.7% on an annual basis. This evolution is largely to be explained by regulatory reforms in the years 2015 and 2017, related to the age limits for requesting an exemption from registering as a jobseeker, as well as consecutive reforms of the scheme of unemployment with company bonus (namely the raising of age and career length requirements). Furthermore, their evolution is influenced by the effects of the babyboom generation reaching retirement age. Since January 1st 2019, the unemployed with company bonus can also opt for an early retirement before reaching the age of 65.

For the exempted elderly unemployed, we observe a decrease by 38.8% or -210 units. For the exempted unemployed with company bonus we observe a decrease by 35.5%: between Q1 2021 and Q1 2022, their number evolved from 25,006 to 16,120 (-8,886).

Influenced by these different factors, the total number of unemployed benefit recipients (seeking work or not and including the unemployed with a company bonus) in Q1 2022 amounts to 324,292 units, which is a decrease by 14.5% on an annual basis.

Partial unemployment

On average, partial unemployment amounted to 272,000 payments per month, which corresponds to 66,972 budgetary units (+/- full time equivalents). We observe a decrease of the number of partially unemployed (-61.7%) on an annual basis, although their number remains quite high.

Of course, in observing these numbers, we need to account for the fact that the corona crisis, which last year caused very high numbers of partial unemployment, now seems to be abating but is being replaced by new crises such as the war in Ukraine and the energy crisis.

Income Guarantee Benefit (IGB)

The total number of payments for the Income Guarantee Benefit (IGB) for part time workers has dropped by 4.7% on an annual basis. Since 2015, the numbers of IGB have decreased sharply in the wake of regulatory changes that took effect in 2015 concerning the computation of benefit amounts and allowance conditions.

Employment schemes

In Q1 2022 we observe a decrease (-3.3%) for the employment and activation schemes and a decrease (-8.3%) for the exemptions.

The evolution of employment measures is influenced by the transfer of competences to the regional level. In Q1 2022 the NEO still remains responsible for the execution of payments for certain transferred employment schemes.

Career break, time-credit and thematic leaves

In Q1 2022 we observe a decrease (-1.6%) on an annual basis for the total number of benefit recipients taking a career break, time-credit of thematic leave (parental leave, leave for medical assistance, leave for palliative care or leave for informal care).

The number of benefits for employees interrupting their work through the time-credit scheme dropped by -6.1% on an annual basis (-5,881 units).

For the career break scheme, we observe a decrease as well on an annual basis (-12.7%). This evolution is partially a consequence of the transfer of competences to the Flemish government since September 2nd 2016. Since then, there have been no new entries in the career break scheme for this region.

The thematic leaves show an increase (+8.0%) of the number of benefit recipients compared to Q1 2021. The evolution of thematic leaves is mainly influenced by that of parental leave, the largest scheme.

Observed labour market indicators

Q1 2022 is characterized by the economic recovery after the worst phases of the corona crisis. The economic growth on a quarterly basis is favorable by +0.3%.

Most labor market indicators show a positive trend. The conjuncture indicator is positive. We see increases for the number of job offers, the hours of agency work performed each day and the creation of enterprises. The number of jobs lost due to bankruptcy and the number of collective dismissals announced have dropped. Furthermore, we observe decreases of partial unemployment, youth unemployment and short-term unemployment.
